

## Services:

Services are applications that work in the background. The seca analytics 115 software uses the services listed below.

- SECA Mediator Service
- seca image service
- seca document print service
- seca database-backup
- seca CLS
- seca calculation service
- PostgreSQL

Make sure you have full administrator privileges on your local system so that you can restart the services in the event of a crash.

### **Automatic recovery for seca related services:**

At the following link you will find the file that will help you to automatically restart the services.
