Services:

Services are applications that work in the background. The seca analytics 115 software uses the services listed below.

- SECA Mediator Service

- seca image service

- seca document print service

- seca database-backup

- seca CLS

- seca calculation service

- PostgreSql

Make sure you have full administrator privileges on your local system so that you can restart the services in the event of a crash.

Automatic recovery for seca related services:

At the following link you will find the file that will help you to automatically restart the services.
